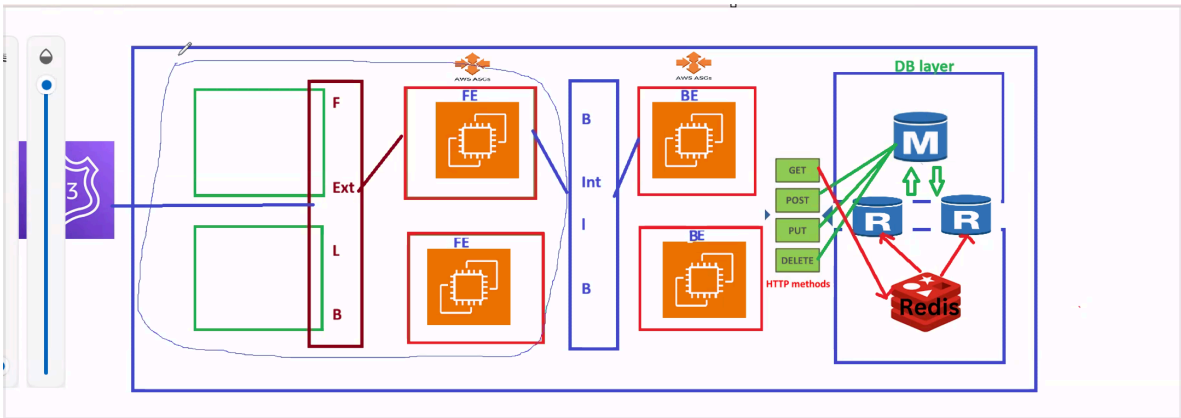
Day12 - 30th April

ALB: Application Load Balancer



First Bastion Host response: Inside private server

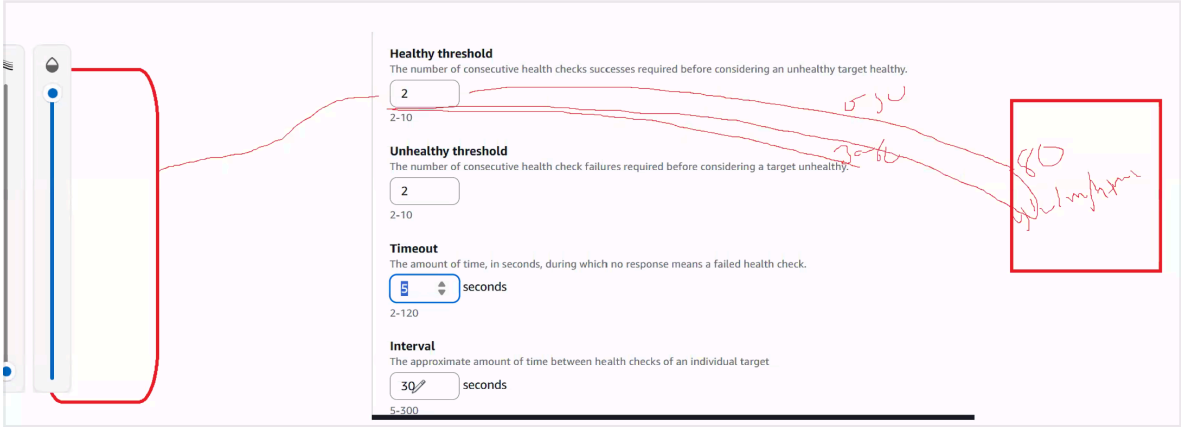
```
Installed:
  generic-logos-httpd-18.0.0-12.amzn2023.0.3.noarch      gperftools-libs-2.9.1-1.amzn2023.0.3.x86_64      libu
  nginx-1:1.28.3-1.amzn2023.0.1.x86_64                   nginx-core-1:1.28.3-1.amzn2023.0.1.x86_64        ngin
  nginx-mimetypes-2.1.49-3.amzn2023.0.3.noarch

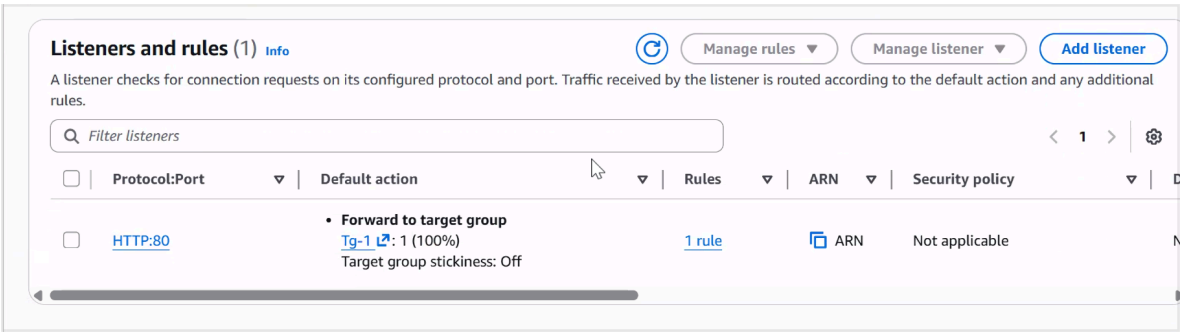
Complete!
[root@ip-10-0-137-246 ~]# systemctl start nginx
[root@ip-10-0-137-246 ~]# cd /usr/share/nginx/html/
[root@ip-10-0-137-246 html]# vi index.html
[root@ip-10-0-137-246 html]# curl http://localhost
<h1> first server response </h1>
[root@ip-10-0-137-246 html]#
```

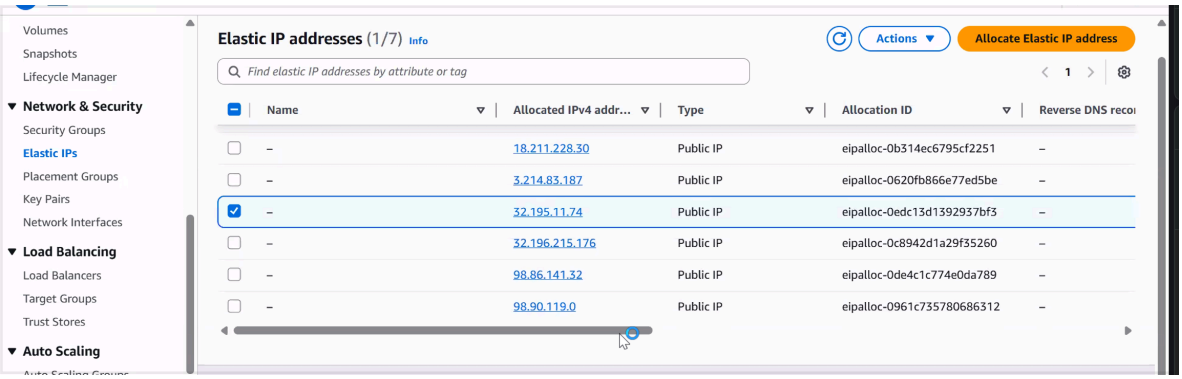
i-02c4d3690ba3ea16b (bastion)

PublicIPs: 44.197.243.176 PrivateIPs: 10.0.9.172

How config private server to load balancer:





Elastic IP: Static IP to server


- Allocate - Associate - Disassociate- Release IP - Delete
  -
