Day18 - 7th May

Mentors: Vardhan, rithik, naveen, abinash
@sri_vardhan1228 @Naveen_gara16 @Abi5593 @ritik_pati @abdulkhan_102

```
1.Create one server and deploy three applications into different paths default,path1, path2 (usr/share/nginx/html/index.html,
usr/share/nginx/html/path1/index.html, usr/share/nginx/html/path2/index.html)
and create Target group for default path only and configure load balancer for target group)

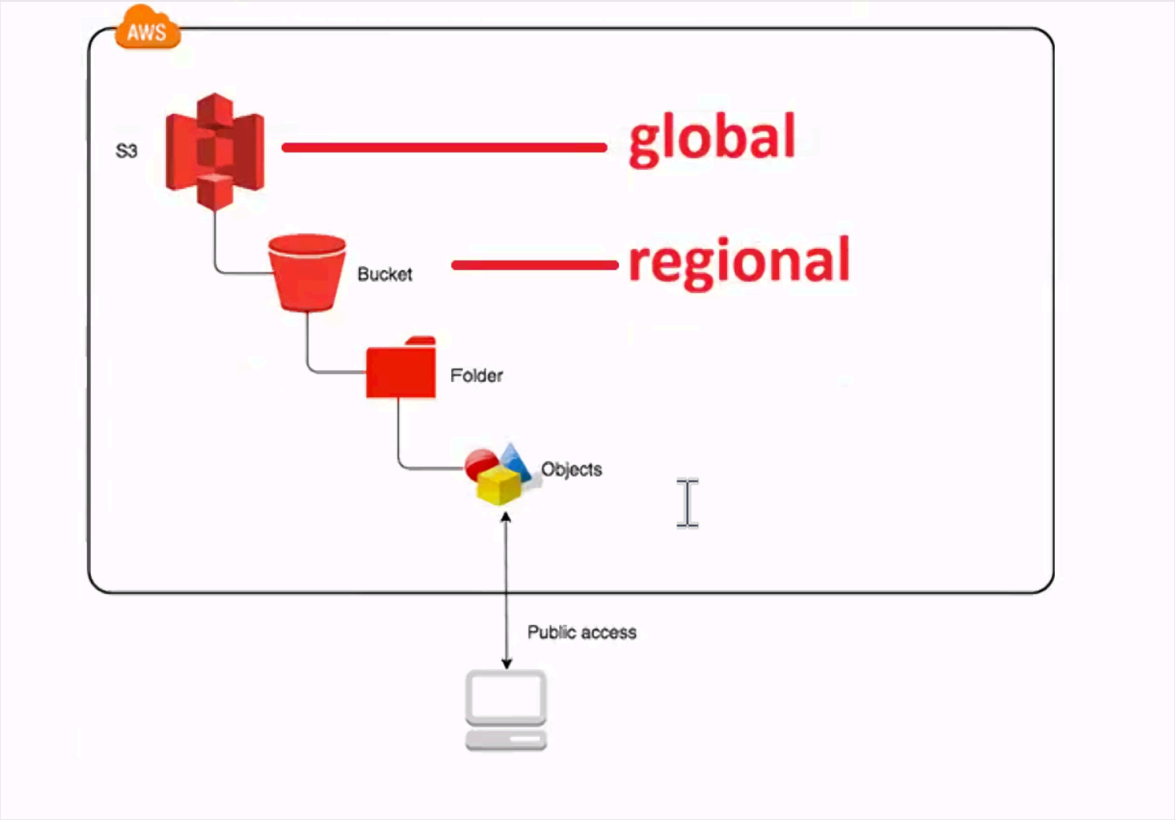
Try to hit only Load balancer dns ----> redirect into which path ?    ----------> default

Try to hit only Load balancer dns/path1 ----> redirect into which path ? -------> able to access

Try to hit only Load balancer dns/path2 ----> redirect into which path ?--------> able to access

2. List common OS problems (if I deploy 3 or 4 application on common OS what kind challenges may occur)
   1. Dependencies issue as common OS
   2. Version conflicts
   3. hardware management is difficult
   4. Security management is difficult
   5. compatibility issues
   6. we can't scale for single application
```

S3 - Simple Storage Service



By default s3 bucket is private if required we can change to public
S3 bucket name should unique globally

S3 offers versioning

Bucket - storage containers
