Day4 - 15th April

what is firewall ? firewall === Security group
Its a security layer
allows only authorized requests and blocks unauthorized request

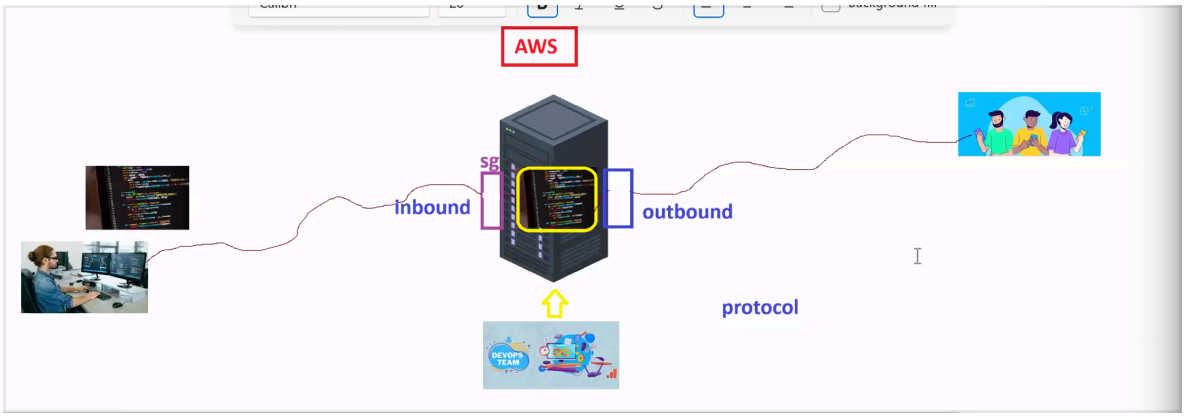
SG - works at server level

- Allows authorised requests & disallow unauthorised requests.

In Security group level we have to define rules that will allow only
Security group works server level

This SG rule contains ---> source , protocol , port and destination

SG contains two types of rules
inbound rule ---> incoming traffic towards the server
Outbound-------> away from server



Can we deploy multiple applications into one server ? YES

what is port: its a logical endpoint inside the server

Total port ranges 0-65535

source: address laptop(IP)

Destination address server IP

174.1.2.3

174.1.2.3:3000 ---> irctc

174.1.2.3:5000 ---> flipkart

174.1.2.3:6000 ---> amazon

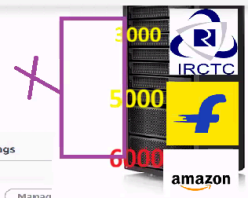
source: address laptop(IP)

Calibri 22 B I U S Background fill

174.1.2.3:3000 ---> irctc

174.1.2.3:5000 ---> flipkart

174.1.2.3:6000 ---> amazon



Inbound rules | Outbound rules | Sharing | VPC associations | Related resources - new | Tags

Inbound rules (1)

IP version	Type	Protocol	Port range	Source
IPv4	Custom TCP	TCP	8502	0.0.0.0/0

Can we deploy multiple applications into one server ? YES

any IP

what is port: its a logical endpoint inside the server

Total port ranges 0-65535

this port only

Add rule

: address laptop(IP)

Destination address server IP

174.1.2.3

174.1.2.3:3000 ---> irctc

174.1.2.3:5000 ---> flipkart

174.1.2.3:6000 ---> amazon

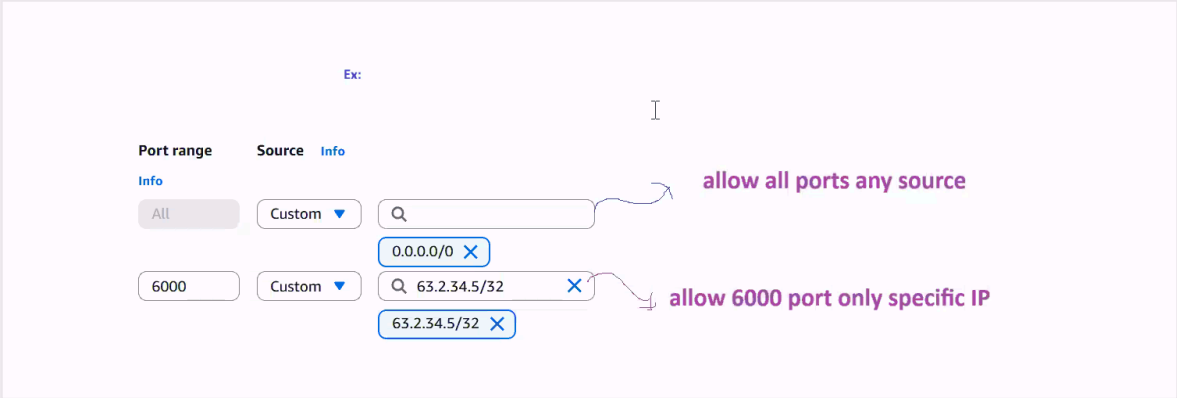
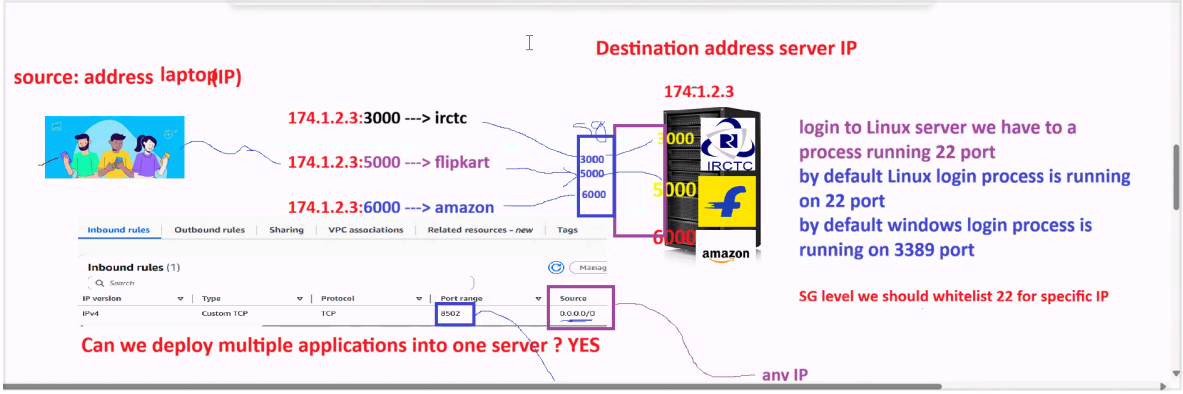
Inbound rules (1)

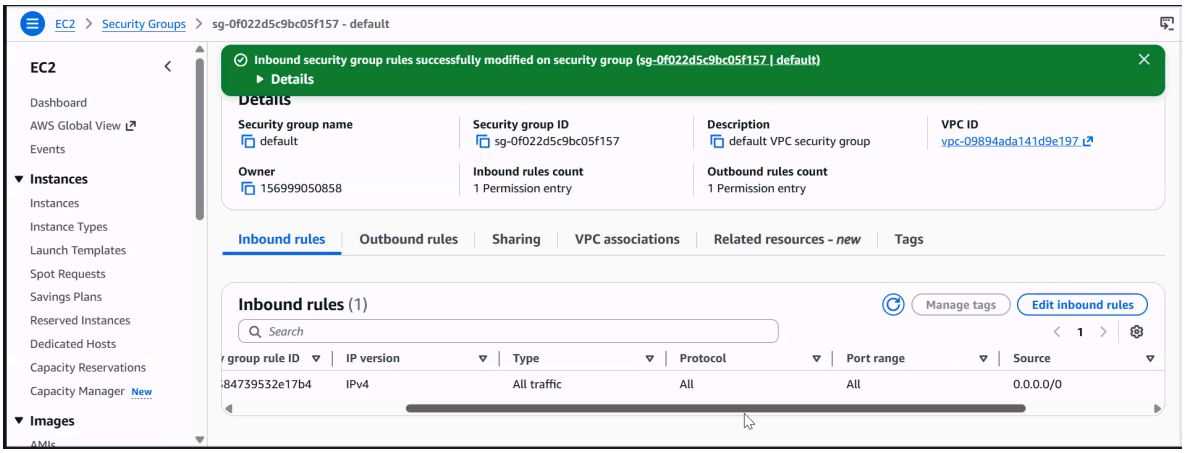
IP version	Type	Protocol	Port range	Source
IPv4	Custom TCP	TCP	8502	0.0.0.0/0

Can we deploy multiple applications into one server ? YES

any IP







what is protocol ?

Set of rules for data communication

how data is transferring and communicating

http //192.3.4.5 5000

on which port process is running

on which server application is running

how data is communicating

HTTP : Hyper text transfer protocol

here request will be traveled to destination as is I mean plain text
ex: 134617281719

HTTPS : Hyper text transfer protocol secure

Data will be traveled into encrypted format not in plain text

how data is communicating

HTTP : Hyper text transfer protocol

here request will be traveled to destination as is I mean plain text
ex: 134617281719

HTTPS : Hyper text transfer protocol secure
Data will be traveled into encrypted format not in plain text
