Day6 - 17th April

Visual Subnet Calculator

Enter the network you wish to subnet:

Network Address: 10.0.0.0 / Mask bits: 16 [Update] [Reset]

Show columns: ☑ Subnet address ☐ Netmask ☑ Range of addresses ☑ Useable IPs ☑ Hosts ☑ Divide ☑ Join

Click below to split and join subnets.
If you wish to save this subnetting for later, bookmark this hyperlink.

Subnet address	Range of addresses	Useable IPs	Hosts	Divide	Join
192.168.0.0/16	192.168.0.0 - 192.168.255.255	192.168.0.1 - 192.168.255.254	65534	Divide	/16

Requirements for Server creation

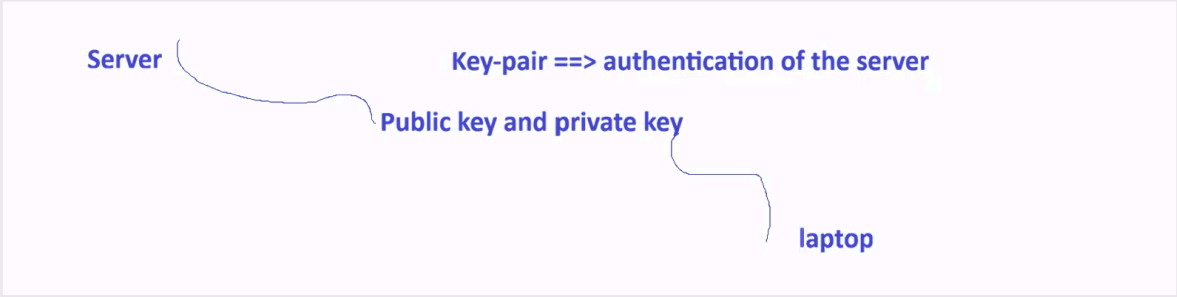
- AMI is region specific

Ec2 creation Ec2=vm=server

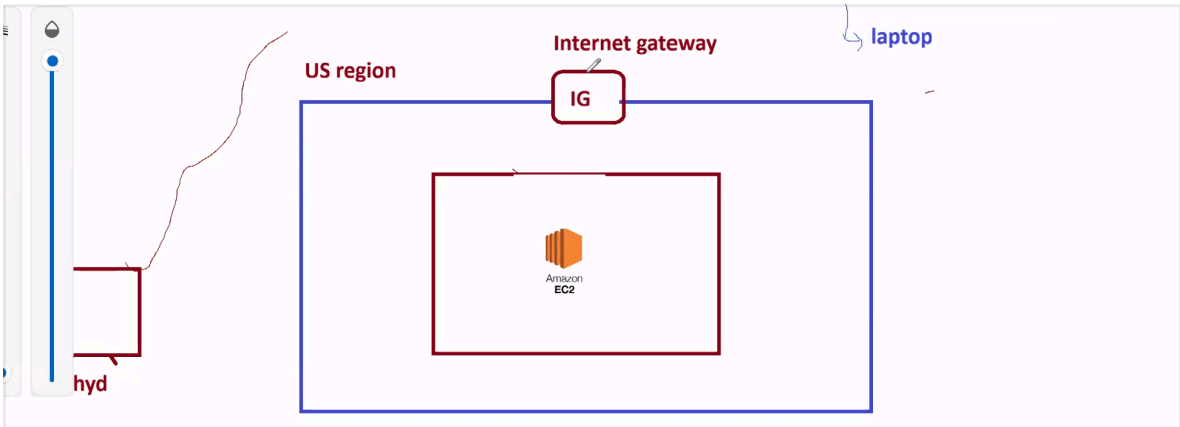
1. OS (operating system)
2. Hardware CPU , RAM (performance)
3. hard disk (storage)
4. Networking (VPC, Subnet and SG)
5. Key (authentication)

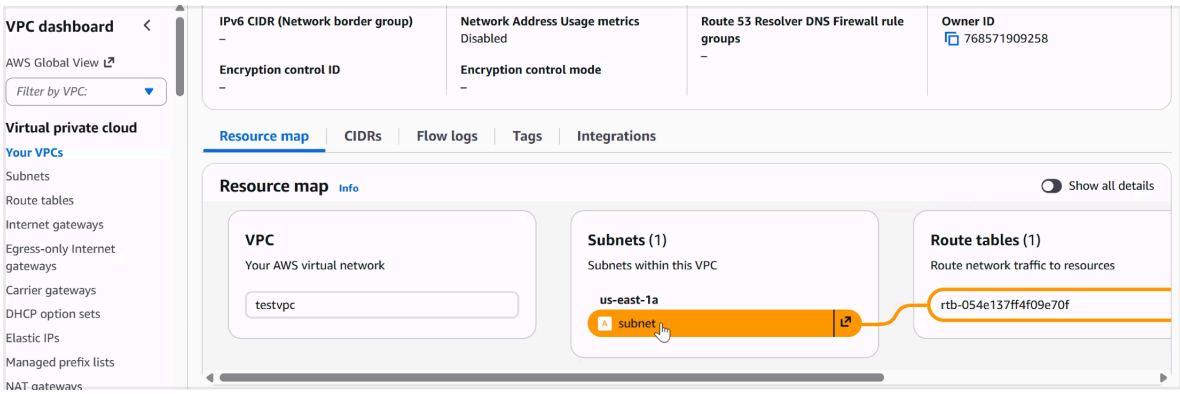
Ec2 creation Ec2=vm=server

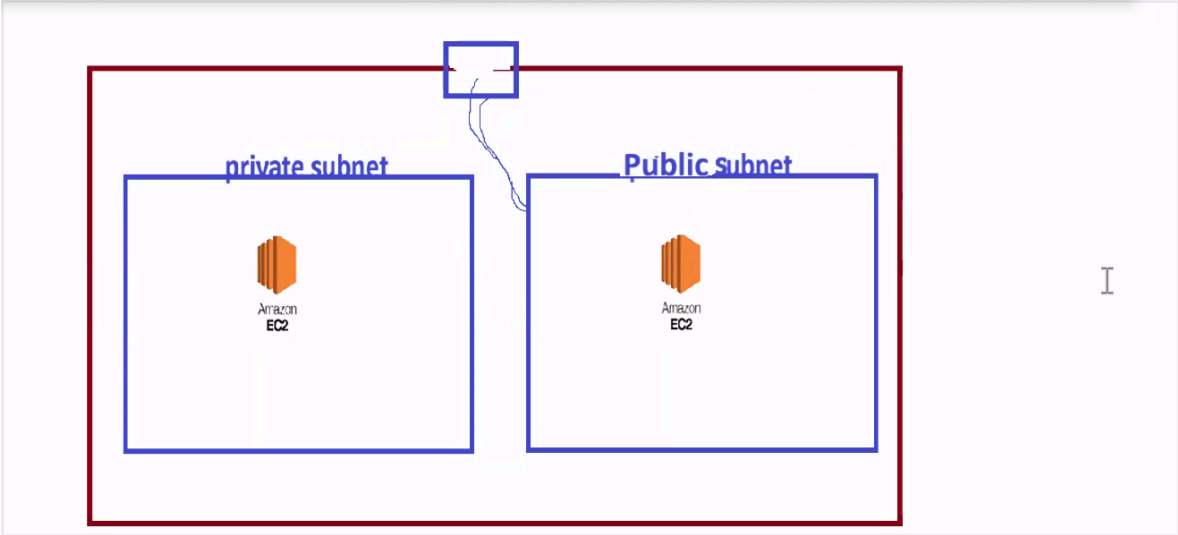
1. OS (operating system)	⇨ AMI (amazon machine image)
2. Hardware CPU , RAM (performance)	Instance type
3. hard disk (storage)	EBS (Elastic Block storage)
4. Networking (VPC, Subnet and SG)	VPC, subnet, SG
5. Key (authentication)	Key-pair



Internet Gateway for VPC - accessing internet



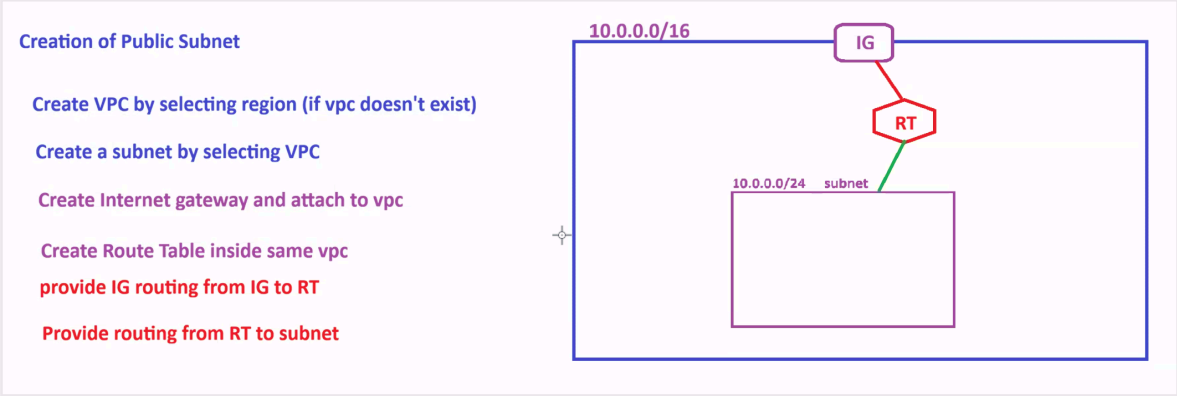


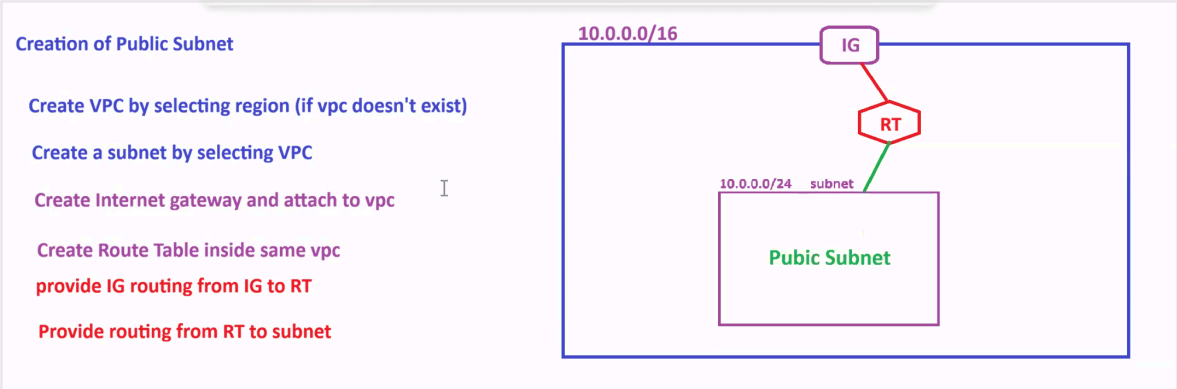


Routable: RT - router for vpc

Internet gateway - IG

Creation of Public Subnet:





Creation of Public Subnet

Create VPC by selecting region (if vpc doesn't exist)

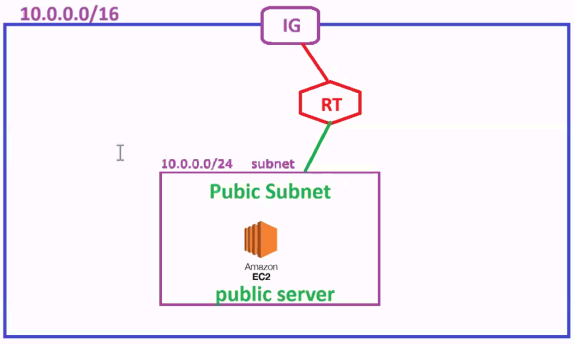
Create a subnet by selecting VPC

Create Internet gateway and attach to vpc

Create Route Table inside same vpc

provide IG routing from IG to RT

Provide routing from RT to subnet



Creation of Public Subnet

Create VPC by selecting region (if vpc doesn't exist)

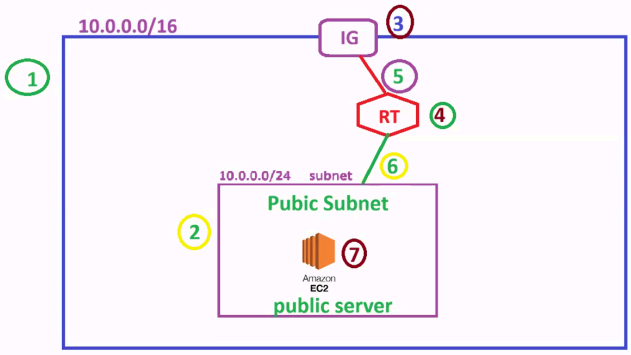
Create a subnet by selecting VPC

Create Internet gateway and attach to vpc

Create Route Table inside same vpc

provide IG routing from IG to RT

Provide routing from RT to subnet



Creation of Public Subnet

Create VPC by selecting region (if vpc doesn't exist)

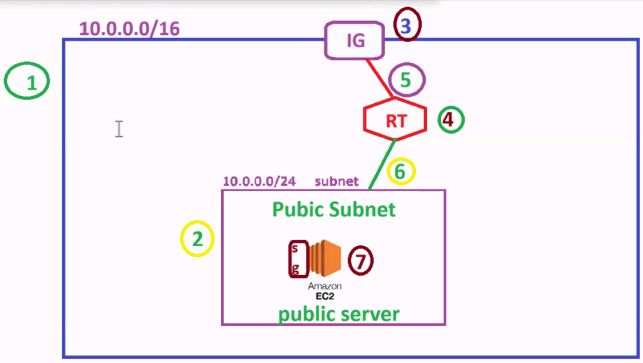
Create a subnet by selecting VPC

Create Internet gateway and attach to vpc

Create Route Table inside same vpc

provide IG routing from IG to RT

Provide routing from RT to subnet



Creation of Public Subnet

Create VPC by selecting region (if vpc doesn't exist)

Create a subnet by selecting VPC

Create Internet gateway and attach to vpc

Create Route Table inside same vpc

provide IG routing from IG to RT

Provide routing from RT to subnet
